

Residential sector

- Multi-generational smart housing clusters with rooftop agrivoltaics and rooftop gardens.
- Neighborhood health clinic and small emergency clinic.
- Local schools / learning hubs (primary and secondary) with AR/VR learning.
- Community parks, green spaces, walking and bike paths through mangroves / green areas.
- Floating markets and neighborhood-scale waterfront markets.
- Community greenhouses and small rooftop farm modules.

Commercial sector

- Government / administration center.
- Research and innovation center (AI, smart grid, agriculture, marine engineering).
- University / higher-education campus or flagship academic building.
- Hospitals or specialized healthcare campus (beyond local clinics).
- Smart grid control center / city hub (can sit at edge of commercial–industrial boundary).
- Food processing / cold-chain hub with public-facing logistics/market interface.
- Larger mixed-use waterfront markets, cultural venues, and public event spaces.

Industrial sector

- Small modular reactor (SMR) plant in a secured industrial zone.
- Algae bioreactor facility (tanks/columns plus plant building).
- Bio-electrochemical food energy cell (BEC) stations and food-waste transfer facilities.
- Energy storage yards with hydrogen tanks and solid-state battery banks.
- Tidal / hydro turbine arrays and canal micro-turbines.
- AquaPod docks and charging stations (logistics-heavy side; passenger-facing side can border commercial).
- High-speed rail / hyper-maglev maintenance and logistics nodes (not passenger stations).
